DYE SUBLIMATION BACKING TISSUE

S. Walter Packaging Corp. is pleased to present a full line of dye-sub backing tissues for blanket protection of rotary heat presses. Our tissues offer the capacity to withstand heavy ink loads thus extending the life of calendar belts. Although impervious to blow through in most applications, our tissue is also extremely light and therefore the most cost effective way of improving print quality, eliminating "ghosting" and keeping heat presses free of ink.

S. Walter offers quick rewinding of custom sizes, "just in time" shipping and warehousing solutions in four states and in Canada. Our LTL freight discounts of up to 86% can also be a major asset when evaluating costs versus other tissue sources.

As one of the largest purveyors of tissue in North America, S. Walter offers a wide array of sizes from 4 to 130 inch. Our tissue, rewound on universal 3" cores can be used in conjunction with the following equipment:

AIT
HASHIMA
MONTI ANTONIO
AND OTHERS...

DIGI FAB
KLIEVERIK
PRACTIX
